# Angle I.D.<sup>TM</sup> Fletcher's Exclusive Component Packaging

Fletcher's Angle I.D.<sup>TM</sup> packaging solutions offer the benefits of easy component identification, customized package labeling and improved inventory control through the use of our **ColorPAC** blister style or **ColorCAP** colorized tube packing.

Quality. Service. Dependability. Value. Since 1868.

## ColorPAC

This market exclusive blister packaging is designed to package Fletcher's line of carbide cutting wheels, inserts, plastic and metal carbide wheel units and axles.

- Individually perforated for easy separation from master blister card
- Peel away corner for component removal reducing the risk of lost components
- 25 individually packaged components on each card – packages in 100 piece master shipper ready for customer's inventory storage
- Seal tight blister packaging to individually hold cutting wheels, axles, clip units & inserts

## ColorCAP

Fletcher offers the colorized tube cap\* used to package our full range of carbide cutting wheels. The assortment of angles is color coded providing quick and accurate wheel identification; eliminating the possibility of using the wrong angle on the production line.

Each cap is color coded to identify the basic range of the wheel angle inside the package with the actual angle stamped on the face of the cap in case the wheel holding pin is separated from the plastic tube.

\* Patent pending

*Companies around the world trust Fletcher's Glass Cutting Technology. Continued advances in wheel, post, axle, unit, and packaging technology ensures performance, reliability and customer satisfaction.*
